

Empower Your Digital Business with Embedded Trust Services

TrustLynx solutions enable digital trust services in your information systems. We offer **ready-to-use tools** for implementation of various **e-identity** and **e-signing, e-sealing, signature collection**, and information processing automation capabilities. Our technology aligns with **eIDAS** and helps you comply with regulations such as PSD2, EPREL, KYC and many more.

Embedded Trust Platform for Innovations and Digitalization

TrustLynx simplifies the integration and user-experience of trust services. Micro-services, APIs, configurable portal templates, mobile apps, and more enable fast and reliable results. Deployed within your company's controlled environment thus ensuring total control over information security and data privacy for your company.

Flexible and scalable deployment.

TrustLynx can be run on any JAVA runtime environment, the micro-services architecture provides flexibility to meet your company-specific security, performance, continuity, and other requirements.

Simplified integration and automation.

Includes tools that cover all information flow from identification of user to signed file in your digital archives so that you can easily introduce new digital products, digitalize and automate business processes in a secure, compliant, and user-friendly way.

INFORMATION SECURITY & DATA PRIVACY

Our solutions seamlessly operate within your firewalls, ensuring total control over information security and data privacy.

INNOVATION & AUTOMATION

We've sorted out the integration and maintenance complexity so you can focus on your business and innovation.

USER EXPERIENCE & CUSTOMER JOURNEY

Introduce a smooth uninterrupted and simplified user experience with minimized user actions and automated processes.
